

There are opinions that more time should be spent at school on subjects such as Mathematics, Science and Computer studies whereas subjects such as Arts, Music and Sports should be studied at home.

I understand that Mathematics and Science are important subjects to study because it will eventually help not only pupils future careers but also help developing science world. However we cannot ignore the importance of Arts, Music and Sports.

Studying Mathematics cannot be easy for some pupils and require more time as well as Science. The world could not be where it is now without the better understanding of science and mathematics.

Also Computer studies has become a must have skill in the past 10 years. In some countries a computer is used even to teach at a kindergarten. Understanding computer is something you cannot avoid in a current computerized world. A computer and softwares used are evolving much quicker than you can imagine. In order to catch up with the latest computer scene you need continuous studying with more time ever.

However, this does not mean studying Arts, Music and Sports are less important for development of children. Children need to be exposed to any subjects that might give them some interests and school should be a place to give them this opportunity to every child. Arts and Music are not important for some children but for some it is something they can pursue all their lives. Also obesity in children has become a serious problem in the developed countries. For some children their only physical exercise is given at school during the sports class.

Arts, Music and Sports might not be considered as important as other subjects such as Mathematics and Science however, it plays a very important role in children's both mental and physical development.
